

SDGs: Sustainable Development Goals

The definition of “SDGs” is as each word implies: Achievable objectives which can be maintained over a long period of time. SDGs are a set of 17 goals agreed upon by all United Nations Member States in 2015 as a call to action to end poverty worldwide by the year 2030.

The following 17 themes make up the SDGs because each of these pieces has shown not only individual success, but also synergy with other goals to help build a stronger foundation any country. In other words, the following 17 components create a solid guideline to follow for countries looking to develop, further prosper, or any objective in between.
